

About me

I am a Software Engineer with 3+ years of experience specializing in React, JavaScript/TypeScript, and Android (Kotlin). My background includes building applications at Zoho Corporation, focusing on inventory systems and cross-platform stability.

I will pursue my Master of Science in Information Systems (MSIS) at the University of Washington in summer 2026. I am a versatile engineer and proactive learner, eager to apply my background in scalable systems to new challenges across full stack applications leveraging AI technologies. I thrive in fast-paced environments that demand rapid adaptation and am committed to continuously evolving my technical skills. I am based in Greater Seattle and authorized to work in the US without sponsorship.

Languages and Technologies

- **Technologies:** React, JavaScript/Typescript, CSS, HTML, MySQL, Cordova and Java
- **Developer Tools:** IntelliJ, VS Code, Git, Postman and Android Studio

Work Experience

Member of Technical Staff: Software Developer Zoho Corporation July 2023 – Feb 2024

- Developed and maintained features for the Inventory Management mobile application within Zoho's Finance organization, focusing on React for Frontend and Android development using Java/Kotlin.
- Supported onboarding activities by addressing active customer tickets, resolving issues and contributing to the development of new feature enhancements based on user feedback.
- Continued to lead operations and maintenance of the existing EarnSmart application, providing end-to-end development support and ensuring stability and performance of the platform.

Member of Technical Staff: App Developer Gofrugal Technologies Feb 2022 – July 2023

- Led the design, development, and end-to-end ownership of Earnsmart, a cross platform (Android/iOS) sales rep application built with React and Cordova, enabling reps to manage daily workloads, schedule orders and returns, track live activities, and complete transactions efficiently.
- Collaborated closely with end customers and product owners to resolve production issues, gather feedback, and enhance application functionalities; integrated native deep-linking between the React app and Gofrugal's printer applications (Java/Android) for seamless Bluetooth receipt printing.
- Owned the complete DevOps lifecycle using Jenkins, overseeing development, testing, and production deployment processes, and successfully published regular EarnSmart updates to the Google Play Store.

Software Engineer: Web App Developer Star Systems Pvt. Ltd. Jan 2021 – Jan 2022

- Contributed to the modernization and mobile optimization of a web application for an online estate sales platform.
- Developed and enhanced seller and admin portal functionalities using React.js, transitioning from a legacy architecture to a modern, reactive application.
- Resolved bugs and addressed support tickets to improve platform stability and performance.
- Implemented responsive design solutions to optimize the application for mobile and smaller breakpoints.
- Independently owned and delivered end-to-end development tasks for seller and admin modules.

Education

University of Washington, Foster School of Business
Master of Science in Information Systems

June 2026
Seattle, Washington

Madras Institute of Technology, Anna University
Bachelor of Technology in Information Technology, Computer Science

August 2016 – September 2020
Chennai, India
